PROFESSIONAL SUMMARY:

- 15+ years of overall experience in the IT industry, specializing in DevOps and infrastructure automation using various tools and cloud services such as **AWS** and **Azure**.
- Deployed and managed cloud infrastructure on **AWS** and Microsoft **Azure**, including the implementation of **Infrastructure as Code** (**IaaC**) practices with **Terraform** and **Ansible**.
- Created and optimized **CI/CD** pipelines and workflows using **Jenkins** and **Azure** Devops to ensure smooth and reliable deployment processes.
- Extensive experience with **AWS VPC**, Subnets, **EC2 instances**, **S3 buckets**, Auto Scaling, and configuration of all necessary cloud services.
- Experience with the **Blue/Green** deployment strategy using **Terraform** and **AWS Elastic Load Balancing** and Amazon **Route 53** for traffic routing and failover.
- Hands-on experience in developing **Ansible** playbooks for automating application deployment and configuration management.
- Good experience in setting up **EKS** clusters for running microservices and deploying them into production on a **Kubernetes**-backed infrastructure.
- Provided comprehensive support for **EKS** clusters, maintaining **Kubernetes** setups and troubleshooting issues such as **ImagePullBackOff**, **CrashLoopBackOff**, and pod scheduling failures.
- Familiar with **Dynatrace** for monitoring and visualizing system performance.
- Strong experience in **containerization** of microservices architecture applications using **Docker**.
- Experience using **Splunk** for log analysis and server performance optimization.
- Experience working with operating systems such as Windows and Linux.

TECHNICAL SKILL SET:

- **Operating Systems** : Linux, Windows
- **Version Control** : GIT
- **Cloud Technology** : Azure, **AWS**
- **IAC tools** : Terraform, Ansible
- **Containerization tools** : Docker, AKS
- **CI Tools** : Jenkins, Azure Devops
- **Languages/Scripting** : Shell Script, PowerShell
- **Application/Web Server** : Tomcat, JBoss, WebLogic, Apache
- **Build Tools** : Maven
- **Repository Management** : Nexus Artifactory
- **Monitoring tools :** Dynatrace, Splunk

Education Qualification:

- **B.Sc** (Computer Science) from Osmania University in 2009
- **MCA** (Computer Science) from Osmania University in 2014

Employment History:

- Worked as **Tech Lead** at **Fiserv** from 11th April, 2018 to 26th Mar, 2026
- Worked as **Senior System Analyst** at **TCS** from December 20, 2017 to April 10, 2018
- Worked as **System Analyst** at **Tech Mahindra** from January 2017 to 13th October 2017
- Worked as at **Amazon Development Centre** from September 2013 - July 2016
- Worked as **Team Developer** at **BA Continuum Solutions** Pvt Ltd from Aug 2009 - Aug 2013

Certifications:

1. **Splunk 7.x Fundamentals Part 1(e-learning)**
2. **Splunk 7.x Fundamentals Part 2 (IOD)**
3. **AZ-900 from Microsoft**
4. **AZ-104 from Udemy**

Project Profile:

Roles & Responsibilities: -

Infrastructure as Code (IaC) & Automation:

- Designed, deployed, and managed **AWS** & **Azure** cloud infrastructure using **Terraform**.
- Automated infrastructure provisioning, configuration, and deployments with **Ansible** playbooks.
- Performed monthly deployments using **Blue/Green** deployment strategy on Amazon Web Services to ensure zero downtime and seamless releases.
- Developed shell scripts to automate infrastructure tasks.

CI/CD & Deployment Automation:

- Built and maintained CI/CD pipelines in Jenkins, automating build, test, and deployment processes.
- Implemented Blue/Green deployment strategies for seamless application rollouts.
- Wrote Ansible playbooks for application deployments, configuration management, and infrastructure updates.
- Created Docker files and images, managing container snapshots, port redirections, and volume configurations.
- Pushed customized docker images to Jfrog Artifactory

Cloud Infrastructure & Security:

Managed Azure services including Virtual Machines, Load Balancer, Storage Accounts, and Monitoring. Configured SSL certificates and security rules.

Monitoring,Logging & Disaster Recovery:

- Implemented monitoring using **Splunk**, **Dynatrace**, **Prometheus** and **Grafana**.
- Designed disaster recovery strategies.

Collaboration & Best Practices:

- Worked closely with development, operations, and security teams to implement DevOps best practices.
- Maintained documentation for infrastructure automation, CI/CD pipelines, and deployment processes.
- Conducted code reviews for Terraform and Ansible scripts, ensuring security, efficiency, and scalability.

Middleware & System Administration:

- Installing and configuring WebLogic/Jboss/Tomcat Application Servers.
- Deployed the web and enterprise applications on the application servers.
- Installed and configured the web servers like Apache, IIS.
- Configured the weblogic clusters, data sources and connection pools.
- Upgrading the weblogic versions and applied weblogic PSU patches quarterly in all the environments by following the SDLC process and plan those activities without any impact.
- Configured monitors and setup the threshold limits for CPU/Memory and Disk space.
- Fixed the security vulnerabilities at the OS level and also on the application servers and web servers.
- Worked with DEV team for the deployments, troubleshooting application specific issues.
- Worked with the QA/TEST team for the application testing and providing them the logs and metrics for more analysis
